

Yassin Abdulmahdi AI Engineer

✉ yasinalmhdi8@gmail.com ☎ +963994250597 📍 Damascus, Syria 🔗 LinkedIn 📁 Portfolio
🐙 Github 🏆 Kaggle

Professional Summary

AI Engineer who takes LLM systems from architecture to production, RAG, agent platforms, and multi-tenant AI SaaS. Experienced leading small engineering teams and owning the full path, model selection, retrieval design, API layer, containerization, and release. Background spans applied research and large data engineering, including multi-million-record telecom data. Computer vision and NLP foundation, with competitive programming grounding in algorithms.

Education

Bachelor of Science in Information Technology Engineering

Sep 2019 – Sep 2024

Damascus University

- Relevant Coursework: Advanced Machine Learning, Computer Vision, Natural Language Processing (NLP), Data Structures & Algorithms, and Software Engineering Principles.

Work Experience

Lead AI Engineer, BeSmart.ai

Feb 2026 – Present | Saudi Arabia

- Lead a small team delivering three generative AI SaaS products from architecture to production release.
- we developed a tool that turns one idea into social media posts in English and Arabic, written to fit each platform, with scheduling, image generation, and a knowledge base per user.
- Designed a synthetic data service that learns from a company's private dataset and generates realistic fake versions they can share or test with.
- Created a platform where companies build their own AI chat agents without writing code, then embed them on any website. Each agent answers from the customer's own uploaded documents using Qdrant for search, and can reach outside tools through MCP servers.
- Run all deployments on Railway in Docker

Teaching Assistant, ASPU - Al Sham Private University

Oct 2025 – Present | Damascus

- Teach undergraduate Artificial Intelligence, Machine Learning, Information Retrieval, and Multimedia.
- Author tutorial materials, programming assignments, and hands-on coding labs bridging theory to implementation.

Data Scientist, TruePositive

Feb 2025 – Sep 2025 | Dubai (Remote)

- Performed Exploratory Data Analysis (EDA) on subscriber activity and revenue data to uncover churn drivers and usage behavior patterns.
- Delivered Drip, RFM, Growth, and GEO analyses for MTN Congo.
- Worked extensively with the telecom subscriber data, integrating data from subscriber demographics, service engagement snapshots, bundle subscriptions, and revenue facts to create a customer view for advanced analytics.
- Built interactive dashboards, giving client teams real-time visibility into KPIs.
- Social Network Analysis pipeline on large-scale telecom data, reducing processing time by 90% through migration from PySpark to DuckDB.
- Collaborated on projects involving Large Language Models (LLMs).

Research And Development Engineer

Oct 2024 – Mar 2025 | Malaysia (Remote)

Rachis Systems Sdn. Bhd

- Built a federated learning framework with adaptive differential privacy and client clustering.
- Enhanced an iris recognition system by improving accuracy and reliability.
- Applied meta-learning to optimize vehicle routing with time windows.

Awards

ICPC - International Collegiate Programming Contest

- Ranked 19th in the 2022 Damascus University Collegiate Programming Contest.
- Ranked 12th in the 2021 Al-Baath University Collegiate Programming Contest.
- Achieved **146th place** out of 400+ participants in the 2021 ACPC Kick-off Online Individual Contest.

ICPCOD [↗](#)

Skills

Generative AI & LLMs: RAG, open-weight LLMs, Llama-3, LangChain, LlamaIndex, AutoGen, agent orchestration, prompt engineering, MCP tool integration,

Frameworks & Libraries: TensorFlow, PyTorch, Scikit-learn, OpenCV, Pandas, NumPy

Backend & APIs: Python, FastAPI, Django, REST API design, multi-tenant architecture

Data & Storage: SQL, Qdrant (vector database), DuckDB, LanceDB, PySpark, ETL pipelines, web scraping

Deployment & MLOps: Docker, Railway, CI/CD pipelines, Git

Volunteering

Tutor, RBCs Team

Feb 2021 – Feb 2023

- Created and shared offline learning materials to support university students in their studies.
- Guided high school students in choosing their university majors by giving practical lectures about different academic paths.

Personal projects

FluentFlow, AI-Powered Public Speaking Coach [Bachelor's Project]

- Engineered a web app that analyzes body language, voice, and speech content, providing AI-driven feedback to improve public speaking skills.
- Integrated Mediapipe + PyTorch for gesture and gaze recognition, Librosa for voice delivery analysis, and NLTK/SpaCy/XGBoost for evaluating script coherence.
- Delivered a Flutter front-end with a Django back-end.

Github [↗](#) **Demo** [↗](#)

Jigsaw Genius; Computer Vision-Based Puzzle Solver

Developed an app using advanced computer vision algorithms to solve jigsaw and grid puzzles with high accuracy.

- Solves puzzles in real time with Python + OpenCV.
- Supports hint images to improve accuracy for complex puzzles.

Github [↗](#) **Demo** [↗](#)

Intelligent Invoice Line Items Extraction & Retrieval System

end-to-end Extract-Transform-Load and RAG pipeline to automate the extraction and structuring of line-item data from unstructured PDF invoices.

Integrated Docling for high-precision table extraction and LanceDB as a vector store to index serialized row data for semantic search.

Deployed Llama-3 to synthesize grounded answers from retrieved contexts, enabling users to query specific invoice details via natural language.

Github [↗](#)

Sketchy, Interactive Drawing Education System for Children

Developed a web application to improve children's drawing skills by providing real-time, AI-powered feedback. The system uses machine learning to predict and assist in the drawing process, creating an interactive and engaging learning experience.

- Predicts intended drawings and provides guidance.
- Offers completion suggestions to boost creativity and learning.
- Models used: Neural Networks, Deep Learning, KNN, RNN.
